EDUCATION

Galgotia college of engineering and technology

Bachelor of Technology in Computer Science

Greater Noida, U.P.

Sep. 2023 – Apr 2027

EXPERIENCE

ML & LLM Data Scientist Intern

Jun 2025 – Aug 2025

Red Panda Games

Remote

- * Built automated biome-generation pipelines that convert text prompts into structured 3D world specifications for game engine ingestion.
- * Implemented a text → image → 3D model workflow using SDXL, Hunyuan3D, FastAPI, and AWS; reduced manual asset creation time.
- * Designed prompt-conditioning and control parameters to stabilize biome outputs, improving consistency of generated assets across diverse environment types.
- * Integrated terrain, vegetation, creatures, and prop generation into a unified asset pipeline producing production-ready 3D environments.

PROJECTS

KisanGPT | *Python, Qdrant, Gemini LLM Transformers, Streamlit*

2025 – Present

- * Built a real-time AI-based agricultural advisory system using a **RAG** pipeline, integrating **Qdrant** vector search, domain PDFs, and 3.5L+ KCC queries to answer farmer queries in Hindi and English.
- * Implemented **vector search with Qdrant** and dynamic context fusion with **Gemini LLM**, enabling accurate, context-aware recommendations for crops, fertilizers, and disease treatment.
- * Designed an interactive **Streamlit UI** exposing retrieved sources, fertilizer suggestions, and concise, actionable insights optimized for non-technical users.

Reddit Sentiment Analysis Web App | *Python, Streamlit, Transformers*

Apr 2025 – May 2025

- * Developed a **real-time sentiment analysis system** using **RoBERTa**, classifying Reddit posts and news data with **68% accuracy**, evaluated using standard classification metrics.
- * Integrated Reddit & News API to fetch real-time data based on user-defined subreddits and queries.
- * Visualized sentiment results using WordClouds, bar & pie charts; included CSV export & responsive UI.

PhishX - Phishing Detection Web App | *Python, Streamlit, Huggingface*

2025 – Present

- * Built a multilingual SMS phishing detection system using BERT, XLM-R language detection, and TF-IDF Naive Bayes hybrid models.
- * Engineered a full Streamlit web app with real-time language ID (English/Hinglish), spam probability scoring, and a custom color-coded confidence meter for interpretability.
- * Added model explainability through TF-IDF feature importance and BERT attention visualization, enabling transparent model reasoning for borderline phishing cases.

TECHNICAL SKILLS

Languages: Python, Java, SQL

Frameworks: React, Django, FastAPI, Streamlit

Libraries: pandas, NumPy, Matplotlib, Tensorflow, Pytorch, Huggingface, Spacy, Nltk, scikit-learn

ACHIEVEMENTS

Galgotia International Hackathon

Sep 2025

- * Finalist at Galgotias International Hackathon 2024.
- * Proposed PayRight AI, an app to help users manage and optimize all subscriptions in one place.
- * Reached the final round among top national teams for innovation in fintech solutions.
